

WATERBASED AIRBRUSH PAINTS – PROFESSIONAL GRADE

STARDUST

THE LARGEST COLORS CHOICE FOR AIRBRUSH WITH
43 ARTISTIC COLORS, 40 METALLICS, 42 SPECIAL EFFECTS, 12 AUXILIARIES

SUPER FINE QUALITY
WATERBASED ACRYLIC-PU

STARDUST®

Waterbased acrylic-polyurethane RC paints for airbrush

Arts Serie
43 colours

The fineness and resistance of solvent-based paints, with a 100% water formula
Premium quality for the highest demands from professional airbrush artists
High fluidity, strong covering capacity, UV-resistant micronized pigments, resistant to gasoline

STARDUST water-based airbrush paints are formulated with the latest generation of innovative resins (polyurethane-acrylic - less than 0.6% VOC), designed to achieve the best technical performance and no toxicity for the user. Can be applied over aluminum, metals, wood, plastics (PE, PP, PC, Lexan, ABS, PS, PVC), fabrics, paper, fiber. Compatible with all types of topcoats. >>> <https://www.stardustcolors.co.uk>

STARDUST®

Metallics Series
35 colours

Airbrush RC Acrylic Polyurethane Water-based Paints Metallic and pearl series

The widest range of metallic and pearl colours for custom, model making, figurines, RC models.
35 iridescent shades for airbrush: rich, very fine, high covering capacity, ultra resistant, made with a water-based formulation containing less than 0.6% of solvents, for both amateurs and professionals.

Stardust metallic range paints are compatible with all primers, paints and topcoats (water based or solvent based). They can be coated with a clear coat or left uncoated. Once dry, they are resistant matt-satin finishes.

They are composed of extremely fine pearl and metallized pigments, and can be used with all types of airbrush. The application is done through thin and repeated passes, until coverage is obtained. It is advised to use them with all sizes of nozzles from 0,2 or 0,3mm, and to apply these paints over our Stardust Black WPU501 Primer, except WPU134 paint (to be applied over a white background) and WPU150* paint.

*The water-based Chrome effect WPU150 from the Stardust range creates a true silver mirror effect when applied over our dry gloss WPU160 Topcoat.

STARDUST®

Airbrush Acrylic Polyurethane Water-based Paints

Hydro Special Effects Series

Chameleon paints change of colour depending on the angle of vision, Holographic paints create rainbow reflections, Candy paints give translucent colourful effects, Fluo paints return more light than they receive, Glow paints are phosphorescent in the darkness.

Special Effects Series
42 colors

- The 20 Chameleon colours are applied over WPU011 or WPU501 black background.
- The 5 Candy colours are applied over all WPU100 Metallics series paints.
- The 10 Fluorescent colours and the 4 phosphorescent colours are applied over our WPU001 or WPU502 white background.

The Stardust fine paint range is completed by a series of auxiliary products (gloss and matt clear coats, adhesion promoters, thinners, hardener, degreaser and cleaner)

The proper rules of airbrush painting

Substrate preparation: All types of substrates can be painted, provided that the rules of preparation are followed and when necessary, a suitable adhesion promoter is used. The substrate to be painted must be clean, dry, healthy (free from contaminants such as glue, grease, silicone, etc.), dusted and sanded if necessary to improve adherence.

A primer should be applied over some bare materials, such as plastics, metals, glass or ceramics. On painted or topcoated substrates, apply a light sanding with 320 to 800 Grit sandpaper.

Paint with water-based paints

Safety: All Stardust range airbrush paints are non-toxic and contain less than 0.6% solvents. However, it is recommended to work with a mask and an air exhaust system or sufficient air circulation.

Thinning: The products are ready for use and do not usually need to be thinned. Very fine, they can be used with all types of nozzles from 0,2mm without thinning. The thinning may need to be increased with S5 and S6 thinners, for example for freehand precision drawing: in this case, a 10-20% thinning is required, while reducing the airflow and the distance from the airbrush to the support.

Air pressure: An air pressure of 1.5 to 3.5 bar can be used, to be adjusted according to the distance to the substrate and the width of the spray.

Compatibility: Stardust paints are compatible with all types of water-based or solvent-based paints.

Background colour: for some Stardust colours*, it is important to respect the colour of the background: the background must be either white or black (metallic and special effects ranges)

Temperature : A working temperature of 10 to 300C is recommended. Below this range, the drying time is extended, and above, there is a risk of dry spraying, when the paint dries on the way between the airbrush and the substrate.

Application: It's important to adjust the distance to the substrate, the air pressure, the thinning and the quantity of product applied: for paints, it is better to apply several thin passes, rather than a thick coat, to promote good adherence and a quality dry film. On the contrary, for topcoats, "wet" passes should be applied, without excess. It is important, for each product, that the necessary drying time interval between each coat be observed.

Drying: Drying and curing is done by evaporation of the water contained in the paint. The touch drying time can be of 2min to 10min, while the through drying time can be of 12 hours to 3 days. It depends on the temperature and the dryness of the air.

Covering and sanding: Stardust acrylic polyurethane water-based paints can be covered or topcoated with a paint or a topcoat by maintaining a direct adhesion between the coats during the 48-72 hours following the application. After this time period, they should be slightly sanded with a fine abrasive (paper or sponge) to recreate the adherence.

Finishes and topcoats: All Stardust range paints are matte finishes that are perfectly resistant once dry. The clear coat is optional, it provides additional protection and a gloss, satin or matte finish.

Airbrush use and maintenance: After each use, it is important to rinse and purge the airbrush several times, without waiting for the paint to dry inside the ducts. It is advised to do a complete disassembling on a regular basis to make a thorough cleaning of the airbrush parts by stripping, brushing, or with ultrasonic cleaner.
